Hi All,

RE: Tender Review - C90306048 - Fire at 23 Mays Street, Devonport [WW-ACTIVE.FID3167762] [WYNNW-ACTIVE.FID3167762]

Find below and attached the current response from Tower Insurance regarding the determinations of claim # C90306048 - Fire at 23 Mays Street, Devonport
For the purposes of this response, we initially address the concerns articulated in paragraph 3 of the Wynn Williams letter (the concerns). These concerns which center around the proposed scope of works being applied under Schedule 1 of the building Act 2004. These concerns are expressly addressed in the PDF attachment: ***ANZ1789 Response to building consent concerns*** & ***39775 23 Mays Street, Devonport Post Fire Structural Assessment REV B , May 26***

Further to the issue addressed above regarding the application of Schedule 1, we have been notified of other concerns noted within the Prendos report. I have provided Tower Insurances response to those below, using the clause heading referencing of the Prendos report where possible. Obviously, many points below are also addressed in the 2 reports provided as attached. Please excuse the duplication. As follows:

6.2.1 – Three braced walls.

Please refer to 'ANZ1789 Response to building consent concerns' [Attached]

6.2.2 – Load bearing walls, braced walls, and floor joists

Isolated components of load-bearing walls are identified as being charred as referred to in section 5.10 & 5.11 of the ASURNZ material damage report dated 4 September 2025, and the post fire structural assessment provide by KCL.

ASURNZ damage report:
[5.10] – Charring has occurred to the timber wall framing of the basement hallway above the door openings of the storage room, and above the door opening to the kitchenette.
[5.11] – The underside of the hardwood flooring of bedroom 2 and several midfloor joist are charred.

KCL Report: Structural Repairs
The charred joists and strip flooring above the kitchenette and bathroom area will require replacement along with the charred internal load bearing wall supporting the joists over the bathroom. This amounts to three charred joists and the associated blocking and flooring above, and the load bearing timber framed wall supporting these joists.

Tower Insurance and its expert consultants have identified all the same individual damaged components referred to in the Prendos report. Our response to the repair and replacement of those components was provided to all parties in Section 9.0 the ASURNZ Material Damage Report dated 4 September 2025. I will provide again below for your reference:

9.0 Building Consent and Design Requirements
The proposed repair work involves the replacement of existing building products with comparable building products in the same position, including the repair/replacement of internal timber wall framing and several floor joists (not a complete or substantial replacement of a wall/floor framing assembly), the replacement of wall, floor and ceiling linings, and the replacement of plumbing fittings and fixtures. This is building work that is described in Section 1, Section 12, or Section 32 of Schedule 1 of the Building Act 2004 (the Act), thereby satisfying the provisions of Section 42A of the Act as building work that does not require a building consent. Note that although a building consent is not required, the building work being undertaken must comply with the building code to the extent required by the Act. In this regard, the provisions of Section 42A (2) of the Act apply for the repair of the existing building, in that after the building work is complete, the building must continue to comply with the building code to at least the same extent as it did immediately before the damage from the event occurred. In effect this means that there is no requirement to upgrade parts of the building that are incidental to or not included in the building work.

Please refer further to 'ANZ1789 Response to building consent concerns' & 39775 23 Mays Street, Devonport Post Fire Structural Assessment REV B , May 26 [Attached]

6.2.3 – Timber floor joists

ASURNZ damage report:
[5.11] – The underside of the hardwood flooring of bedroom 2 and several midfloor joist are charred.

KCL Report: Structural Repairs

The charred joists and strip flooring above the kitchenette and bathroom area will require replacement along with the charred internal load bearing wall supporting the joists over the bathroom. This amounts to three charred joists and the associated blocking and flooring above, and the load bearing timber framed wall supporting these joists.

Tower Insurance and its expert consultants have identified all the same individual damaged components referred to in the Prendos report. Our response to the repair and replacement of those components was provided to all parties in Section 9.0 the ASURNZ Material Damage Report dated 4 September 2025. I will provide again below for your reference:

9.0 Building Consent and Design Requirements
The proposed repair work involves the replacement of existing building products with comparable building products in the same position, including the repair/replacement of internal timber wall framing and several floor joists (not a complete or substantial replacement of a wall/floor framing assembly), the replacement of wall, floor and ceiling linings, and the replacement of plumbing fittings and fixtures. This is building work that is described in Section 1, Section 12, or Section 32 of Schedule 1 of the Building Act 2004 (the Act), thereby satisfying the provisions of Section 42A of the Act as building work that does not require a building consent. Note that although a building consent is not required, the building work being undertaken must comply with the building code to the extent required by the Act. In this regard, the provisions of Section 42A (2) of the Act apply for the repair of the existing building, in that after the building work is complete, the building must continue to comply with the building code to at least the same extent as it did immediately before the damage from the event occurred. In effect this means that there is no requirement to upgrade parts of the building that are incidental to or not included in the building work.

Please refer further to 'ANZ1789 Response to building consent concerns' & 39775 23 Mays Street, Devonport Post Fire Structural Assessment REV B , May 26 [Attached]

6.2.4 – Wall insulation [ground floor external]

Acknowledging that wall insulation remains in places to the ground floor external walls. Further to this, it is acknowledged that the wall insulation to the external ground floor wall framing will be included in the scope of work.
As this thermal insulation is acknowledged as being pre-existing with the dwelling – it is eligible to be replaced under Schedule 1 of the Building Act, 2004.

Please refer to 'ANZ1789 Response to building consent concerns' [Attached]

6.2.5 – Unreinforced masonry perimeter load bearing structural walls

These wall present with smoke staining to a variety of degrees depending on the locations within the ground floor of the dwelling. Tower has acknowledged this and has provided a response to this in the letter to Wyn Williams dated 27 March, 2026. As below:

Masonry Walls

1. Prendos raises a possibility of heat-related weakening of unreinforced masonry walls. Tower has not been provided with any evidence that the masonry foundation wall has been structurally compromised by the fire. The masonry shows no visible fire damage beyond minimal smoke staining. The limited charring observed to adjacent timber framing indicates temperatures well below those at which clay brick masonry would be structurally affected.

2. On that basis, Tower considers the masonry walls to be materially unaffected. If your client wishes to obtain independent expert evidence demonstrating heat-related damage, Tower will consider that material if provided. If your client provides a report that materially changes Tower's position on this, then we would consider reimbursement of the reasonable costs associated with this.

Tower has now provided a specific CPeng report to support our prior assertion above. Please refer further to 'ANZ1789 Response to building consent concerns' & 39775 23 Mays Street, Devonport Post Fire Structural Assessment REV B , May 26 [Attached]

6.2.6 – Fire damaged rear deck structure

Deck height of over 1.5m is irrelevant as Schedule 1 applies because we are replacing damaged components of an existing structure with same materials. Referred to in letter to Wyn Williams dated 27 March, 4(d)
Please refer to 'ANZ1789 Response to building consent concerns' [Attached]

6.2.7 – Fire damage observed to timber framing and fixings below sunroom

All hardwood decking to the sunroom is scheduled to be replaced, as scheduled in line 336 of the scope of works.
All fixings can be inspected once flooring above has been removed. Noting that these fixings are all stainless steel – which will respond to cleaning to remove surface smoke residue.
Items such as stainless-steel joist-hangers can be included in the scope of works to be replaced if acceptable cleanings is not achieved.
Any timber framing within the subfloor area of the sunroom will respond to light surface cleaning, as the resulting damage to this framing is negligeable smoke damage.

6.2.8 – Roof space fire damage

On 21 August 2025 Grant Metson [Tower Insurance] & Lei Yui [ASURNZ] entered the roof space to conduct a thorough investigation of the roof space. As did Alexandra Dalzell [Forensic Specialists] to complete forensic testing for contamination.
The findings of the Forensic Testing where that minor trace elements of smoke contamination were present to the underside of the roofing underlay paper directly above the external wall cavities. Whilst no physical evidence of any smoke damage was visible to any of the elements within the roof space – there was a marginally perceptible odour of smoke in the roof space. To that end the following has been provided for within the scope of works:

- Replacement of 94.53 sqm of R3.2 170mm ceiling insulation to the roof space. Total replacement. Line 101 of the scope of works.
- Cleaning and smoke sealing of the complete roof structure framing. Line 75 of the scope of works.
- Complete replacement of the roofing iron underlay. Line 53 of the scope of works.
- Complete replacement of the corrugated roofing cladding. Line 74 of the scope of works.
- Scaffolding and shrink-wrap enclosure of the dwelling to facilitate the above works. Line 17 & 18 of the scope of works.

None of the work proposed above require a building consent as they fall within the requirements of Schedule 1 of the building Act, 2004.

Prendos Report – Section 7.0 – Analysis

7.1.1

Braced walls
Bracing walls identified will be re-lined with gib wall linings in accordance with NZS3604 under Schedule 1 of the building Act, 2004.
Wall insulation to external ground floor walls
Wall insulation to the external walls of the ground floor of the dwelling will be replaced were the same has been removed or has been affected by the fire. This will be included in a revised scope of works to be shared by all parties.

7.2 – Requirement of Building Consent

7.2.1 through to 7.2.3 [including incorrectly formatted 7.2.4]

Tower Insurance re-iterates its position that all works proposed in the scope of works are permissible under schedule 1 of the building Act, 2004. All points raised in the Prendos report : 7.2.1 through to 7.2.3 [including incorrectly formatted 7.2.4] are incorrect based on the following:

9.0 Building Consent and Design Requirements
The proposed repair work involves the replacement of existing building products with comparable building products in the same position, including the repair/replacement of internal timber wall framing and several floor joists (not a complete or substantial replacement of a wall/floor framing assembly), the replacement of wall, floor and ceiling linings, and the replacement of plumbing fittings and fixtures. This is building work that is described in Section 1, Section 12, or Section 32 of Schedule 1 of the Building Act 2004 (the Act), thereby satisfying the provisions of Section 42A of the Act as building work that does not require a building consent. Note that although a building consent is not required, the building work being undertaken must comply with the building code to the extent required by the Act. In this regard, the provisions of Section 42A (2) of the Act apply for the repair of the existing building, in that after the building work is complete, the building must continue to comply with the building code to at least the same extent as it did immediately before the damage from the event occurred. In effect this means that there is no requirement to upgrade parts of the building that are incidental to or not included in the building work.

Please refer to 'ANZ1789 Response to building consent concerns' [Attached]

7.3 – Owners Obligations

7.3.1 and 7.3.2
Relates to recurring point of contention regarding the correct application of Schedule 1 of the Building Act, 2004.
Please refer to 'ANZ1789 Response to building consent concerns' [Attached]

7.3.3

Refer to response provided in letter to Wyn Williams dated 27 March, 2026. As follows:

Policy Standard

11. The applicable standard for reinstatement is governed by the express terms of the Policy. It is not determined by trade terminology used in a scope of works, nor by subjective expectations as to aesthetic outcome.

12. Under the Policy, Tower's obligation in the event of an economic repair is to meet the reasonable cost of repairing the house to a standard that is reasonably equivalent to its appearance, size, functionality, and relative quality when new, without necessarily reproducing it exactly. That formulation reflects a well-established distinction in New Zealand

insurance law between a requirement to restore functional and qualitative equivalence, and any obligation to deliver a pristine or upgraded outcome.

13. Where damage is repaired rather than replaced in full, the Policy recognises that the repaired element cannot, in a literal sense, be rendered “new”. In those circumstances, the applicable standard is directed to the materials and workmanship used in the repair, assessed by reference to whether the completed works restore the relevant element to a condition that is reasonably equivalent in function and quality to its insured state, rather than whether the element is indistinguishable from a newly constructed component.

14. The Policy does not impose an obligation to improve, upgrade, or replicate owner-driven renovations, nor does it require reinstatement to current building standards except to the extent required by law. The use of modern materials and methods is contemplated only as a means of achieving the required functional equivalence, not as a basis for elevating the standard of the building beyond that insured.

15. The scope prepared by Asurnz was developed to give effect to this contractual standard. It reflects the assessor’s determination of what work is reasonably required to repair the insured damage, including replacement where necessary and cleaning, repainting, or reinstatement where replacement is not required. The absence of the phrase “when new” in the scope does not alter the standard to be applied, which is fixed by the Policy wording itself.

16. Any assessment of the adequacy of the scope or of completed works must therefore be undertaken by reference to the Policy definition of repair cost, and not by reference to a requirement to return repaired elements to their precise pre-loss condition or to an elevated aesthetic standard achieved through prior renovations.

17. Where Tower elects to manage the repairs, the works will be carried out with reasonable care and skill and in compliance with applicable legal requirements. That obligation does not require the highest possible finish or the adoption of a particular trade standard unless expressly required by the Policy or otherwise agreed.

18. Tower’s position remains that the proposed reinstatement works, when carried out in accordance with the agreed scope, will meet the Policy standard.

7.3.4 – Decontamination.

All swab samples that have returned a positive result as identified in the ASURNZ report and Forensic Specialists Combustion Pre-Decontamination report will be retested to verify that cleaning, and or replacement of these items has provided successful decontamination.
The Forensic Specialist report recommends:
b) Decontamination is undertaken by a suitably qualified and experienced contractor to reduce the levels of chemical and combustion particulates as far as reasonably practicable.
c) Following completion of the cleaning inside the building we recommend the areas are re-tested and a Clearance Certificate issued only to the areas highlighted as having elevated levels.
This report is to be read in its entirety to ensure a complete understanding of the surveying, sampling, and reporting process is understood.

Any items / elements which have returned positive contamination results are included in the proposed scope of works to either cleaned, decontaminated or replaced. The contamination testing completed and remedial works proposed are sufficient to ensure that the policy will fulfill its obligations, with the provision of post cleaning testing verification and corresponding contamination clearance certificate .

7.3.5 – Remaining contamination

This is speculation, as decontamination and post decontamination testing has not yet occurred.

7.3.6 – Internal wall cavities [first floor]

Sample #17 in the Forensic Specialist Report was taken from the back of the gibboard wall lining in the internal wall cavity between bedroom 2 and bedroom 3. Test results returned: *Below acceptable levels*
Sample #18 in the Forensic Specialist Report was taken from the side of the timber wall stud in the internal wall cavity between bedroom 2 and bedroom 3. Test results returned: *Below acceptable levels*

As this internal wall cavity is directly above the seat of the fire in the ground floor below – it is reasonable to conclude that the remainder of the internal wall cavities within the first floor contain no event related contamination. Please refer to results provided in the Forensic Specialist Pre-Decontamination Survey Report – page 20.

7.4 – Unreinforced Masonry

Please refer further to ‘ANZ1789 Response to building consent concerns’ & 39775 23 Mays Street, Devonport Post Fire Structural Assessment REV B , May 26 [Attached]

7.5 – Smoke Damage

Tower Insurance considers it has included remediation measures for all smoke affected timbers within the dwelling within the current scope of works provided.

7.6 – Bathroom Removal and Reinstatement

Please refer further to ‘ANZ1789 Response to building consent concerns’ & 39775 23 Mays Street, Devonport Post Fire Structural Assessment REV B , May 26 [Attached]

8.0 – Summary

8.1.1 & 8.1.2 – Application od Schedule 1.

Please refer to ‘ANZ1789 Response to building consent concerns’ [Attached]

8.1.3 – Latent Carcinogenic Contamination

Tower remains open to considering further information on this matter. Tower has already provided an adequate response by way of provision of A-07107 Combustion Pre-Decontamination Survey – Forensic Specialists.

8.1.4 – Unreinforced Masonry Walls

Please refer further to ‘ANZ1789 Response to building consent concerns’ & 39775 23 Mays Street, Devonport Post Fire Structural Assessment REV B , May 26 [Attached]

8.1.5 – Drawings and specifications required for managed repair.

Tower Insurance will provide high level details, specifications, and drawings where they are required to complete repairs within the proposed scope of works.
8.1.6 – Revision of current scope of works

1. Agree to include supply and installation of insulation to affected ground floor external walls

8.1.7
Covered in 8.1.5

……..

The above is the Tower Insurance complete response to the Prendos Report provided to us on 3 March, 2026.
Tower Insurance remains resolute that a Building Consent is not required for the proposed scope of works, as is clearly outlined by our expert consultants in the documents attached to this response:

1. ‘ANZ1789 Response to building consent concerns’
2. 39775 23 Mays Street, Devonport Post Fire Structural Assessment REV B , May 26 [Attached]

Tower Insurance would like to express a keen willingness to complete the proposed scope of woks under a managed repair scenario. I am willing to provide a framework for that to be undertaken to be considered by our customer.

We look forward to your response.
Best Regards,
Grant.

Subject: RE: Tender Review - C90306048 - Fire at 23 Mays Street, Devonport [WW-ACTIVE.FID3167762] [WYNNW-ACTIVE.FID3167762]

Good afternoon Lance,

I've just tried to call – could you please call when convenient tomorrow.

Unfortunately, your letter doesn't address the specific concerns that Prendos has raised, or provide any consideration of the specific provisions which Tower says exempt all the work.

Apart from perhaps the floor joists mentioned at paragraph 4.a. of your letter, which are arguable / discretionary based on damage and interpretation, the rest of the works are specifically excluded from the exemptions in Schedule 1. The general 'maintenance' provisions of schedule 1 item 1 do not override the specific exclusions in the rest of the Schedule. Especially when all the work is being undertaken at once. Just one example is the internal load bearing and bracing walls:

Internal walls and doorways in existing building

Building work in connection with an internal wall (including an internal doorway) in any existing building unless the wall is—

(a) load-bearing; or
(b) a bracing element; or
(c) a fire separation wall (also known as a firewall); or
(d) part of a specified system; or
(e) made of units of a building product (such as brick, burnt clay, concrete, or stone) laid to a bond in and joined together with mortar.

I will happily talk you through the specific provisions of the Building Act schedule 1 if that would assist, but we do not accept that this work can be carried out without consent. If you have taken expert advice on this consenting, please provide it. Otherwise, please reconsider your position.

Kind regards

Richard Hargreaves

Good afternoon, Abigail & All,

Re: C90306048 - Fire at 23 Mays Street, Devonport [WW-ACTIVE.FID3167762]

Please find attached the following documents included in the tender review for Tower Claim# C90306048:

1. Uncosted scope of work provided to all tender respondents. A copy of which has already been presented.
2. ***Asset Managers*** tender response [Column O – Tender comparison]
3. ***Arc Projects*** tender response [Column M – Tender comparison]
4. ***JLG*** tender response [Column K – Tender comparison]
5. Comparative summary spreadsheet including ASURNZ cost estimate. [Column I – Tender comparison]

All tenders are complete and have accounted for all items detailed on the uncosted scope of works provided by

All tenders are complete and have accounted for all items detailed on the uncosted scope of works provided by ASURNZ.
In the comparative summary you will see that I have presented some line items in blue. This is to indicate where the tenderer has provided a PC sum for this item.
Any questions which you may have in relation to any of the specific items in the tender comparison, please do not hesitate to ask.
Our recommendation is to settle the structural claim based on the most competitive tender response provided by JLG. $419,434.08 Incl GST.
I look forward to further correspondence and receiving the findings from your independent consultants in due course.
Best Regards,
Grant.

Thanks Richard,
I have received the final response last night. I will need to do some work to complete a tender review analysis in the first instance.
There is some work to do there – but I should be able to complete that analysis work, and share it by the end of next week.
I look forward to sharing something with you then.
Regards,
Grant.

Hello All,
Referring to your email below of December 9.
Are you able to indicate the status of the undertaking of your independent investigations as proposed below.
We have received 3 tender responses back from the reinstatement service providers who attended site with Raffaella and myself late last year.
As we are all aware we have received these tender responses based on the scope of works provided by ASURNZ and subsequently shared with all parties.
Agreement on the scope of works is paramount to claim progression. If we can move to determine the agreed scope for claim related loss – we can move quickly afterwards to provide the final outcome.
I look forward to an update on your independent enquiries.
Thank you very much.
Regards,
Grant.

Good afternoon Grant,

Thanks for your email below. My client does not accept that this scope includes all the necessary work to reinstate the fire damage at her house. However, in order to keep this claim moving towards resolution, please proceed to cost Tower's scope of works as you suggest.

My client's experts will review the scope and repair methodology and we will revert. Due to the time of year, this will not be until late January. Some issues which we require expert input on include:

1. Checking the structural methodology
2. Building Consent Costs, including engineering
3. Any consideration of Heritage/Natural Character Overlay requirements specific to 23 Mays Street
4. Any assessment/provisional cost for water pipe damage (informed by the fire service reporting likely damage)
5. Any assessment/provisional cost for gas lines and gas unit
6. Soot, PAH, VOC or other combustion testing for carbon
7. Potential for damage / contamination in wiring
8. Potential knock-on consequences for electrical in the rest of the house
9. Insulation removal/replacement in cavities
10. Moisture mapping
11. Mould assessment or treatment
12. Potential corrosion from chlorides

We will let you know when this is completed.

Lance, we are waiting for your assessment of temporary accommodation costs. We discussed whether an additional sum could be paid on the basis that there was delay in commissioning testing. Raffaella is now out of pocket for temporary accommodation so your response on this point would be appreciated.

Kind regards

Hello Raffaella,
I trust this email finds you well.
Following on from email last Monday - I would like to receive your permission to begin the process of obtaining preliminary tender responses for your claim.
It would be a significant progression if I could work with tender respondents and begin the tendering process before the beginning of the Christmas break.
Please advise me if I have your permission to begin this process.
Many Thanks,
Grant.

Good morning Raffaella, Richard & All,
Please find attached the following documents for your review:

- Combustion pre-decontamination survey [sent prior]
- ANZ1789 supplementary report
- Post fire structural assessment report
- ANZ1789 scope of works [revised & updated]

The updated scope-of-works attached has been created as a proposed inclusive response to the findings of all the documents attached.
While you are reviewing the attachments, I would like to propose that I begin the process of obtaining repair proposals from Tower approved builders to progress the claim as quickly as possible.
If I send out the scope of works now and offer to meet with the tender respondents onsite, we may well have some preliminary costings to hand prior to the end of the business year.
Please confirm your approval for me to begin the process of preliminary pricing now.
Best Regards,
Grant.

Hi Grant,

Please see attached completed Supplementary Report and associated files, including our updated Scope of Work.

The scope of work includes all items listed in your email below, except for the replacement of the heating unit in the roof space. We are confident that this unit does not need replacing but instead requires checking, servicing (including replacement of filters) and recommissioning.

Please let us know if you have any questions or require further information.

Kind regards,

Stephen Walker

Hi Grant,

Please see attached report received from the structural engineer today. In brief, the engineers report has not identified any damage that was not already provided for in the ASURNZ report.

We have finished reviewing the reports now and are in the process of updating the scope of works to include any new items for repair resulting from the information available in the report from Forensic Specialists. We will have the updated scope of works and a covering letter to you before Monday morning.

Kind regards,

Stephen Walker

Subject: FW: C90306048 - Fire at 23 Mays Street, Devonport [WW-ACTIVE.FID3167762]

Hi Stephen,
Below is a copy of an email which I sent to all parties this afternoon outlaying the expected time frames of the results which will be available to be shared with all regarding test results from 23 Mays Street, Devonport.

Prior to receiving the report from the forensic testing – I am keen to take whatever steps I can to progress the claim. Preliminary results and findings suggest that we may have a relatively complete understanding of what the final scope of works will be to fully remediate the property under the claim.

If we accept on a preliminary basis that the scope of works required to remediate the property is **generally defined** as follows:

Basement Level

- Clean and decontaminate all exposed internal brick surfaces to ground level of dwelling
- Replace charred timber framework to midfloor structure and ground floor walls as required
- Rebuild rear deck and steps to match existing
- Replace all hardwood decking boards to internal balcony
- Clean and encapsulate all timber structural components to ground-floor walls and midfloor structure as required
- Replace midfloor insulation
- Replace ceiling linings to ground floor as required
- Supply and install rear pedestrian door to rear of ground floor
- Clean and repaint bi-folding basement doors to ground floor

Second Level

- Disconnect, clean, and reinstall existing electrical outlets and fittings as required
- Remove all gib-board linings from the interior of the dwelling – exterior walls only [?]. Ceilings to remain
- Clean and decontaminate all interior brick surfaces in the exterior wall cavities
- Encapsulate all timber framing to all exposed walls
- Re-line all exposed walls with new gib-board wall linings. Gib-stop and sand to L4
- Seal and apply 2 topcoats to all new plasterboard linings
- Clean and repaint all remaining interior surfaces. Internal doors, exterior joinery, wardrobes, etc
- Remove kitchen cabinetry as required to clean and decontaminate any adjoining wall surfaces
- Strip and refit entire bathroom to allow for decontamination and remediation as required. Reuse existing fitting and fixtures where possible
- Clean polished hardwood strip flooring [no re-coat of polyurethane]

Roof Space

- Remove and replace all existing roof insulation
- Encapsulate all timber roof structure framing.
- Remove and replace roofing underlay paper
- Remove, dispose of existing roof cladding
- Supply and install new roofing cladding to match existing
- Supply and install new PVC spouting and downpipes
- Clean and repaint soffits
- Clean and repaint fascia board
- Supply and install new central heating unit to match existing – or equivalent

General

- Scaffold and shrink wrap dwelling to enable works
- Preliminary & General works as required

I will need to discuss the above with you in some detail, accepting that you may make corrections as required – however once we have discussed the ***draft proposed scope*** I will request that you provide Tower Insurance with a draft copy of the scope at which we arrive, and an accompanying cost estimate for reserving and quoting purposes.
Let's talk tomorrow when we can.
Many Thanks,
Grant.

Good afternoon Raffaella & All,
I have just spoken with Abigail Collin re the forthcoming test results.
We expect the test results to be available to share with all parties by the end of next week. I have chased the provider to expedite this.
The preliminary report from the Forensic Testing will contain the 'raw data' from the laboratory results, and the locations of the sample sites from where the tests were conducted.
As promised this preliminary report will be shared with all as soon as it is received and it will be followed by a fuller report which will provide Towers position on the findings of the report.
Thank you for your continued patience.
Regards,
Grant.

Hello Raffaella,
As requested, Tower Insurance will share all information, laboratory test results, supporting information, raw data & photographs from the testing process as soon as we receive them – this will be in individual files, and not within the context of a full report with further relevant context and commentary.
All the above items will be incorporated into a full covering report which will take a little while longer to produce. The full report will also be provided to you as soon as we have received it.

Thank you so much for your time and input you shared onsite with us, while we conducted the tests. I look forward to sharing the results with you as soon as possible.
Best Regards,
Grant.

Kia ora Grant,

As discussed on Monday, could you please provide, as soon as possible, the full list of tests performed during the 17 October site visit, together with the raw data as it becomes available, and then the formal reports when issued. This is to accelerate the identification and sourcing of any missing tests or gaps.

Please include for the list of tests performed:

1. Test name and brief description
2. Sampling scope and exact locations (room/area, height, within-cavity vs surface)
3. Field notes for each sample (date/time, sampler, method, pre/post-clean trial where applicable)
4. Photographs tying samples to locations and any before/after decontamination trial images
5. Any areas not tested and the rationale

Please include for the test results / raw data:

1. As above plus
2. Laboratory details for each sample (lab name, job ID/COC, method codes, analytes, units, detection limits/LOQs, QA/QC including blanks/duplicates)
3. Raw data and Numerical results of each test
4. Results of any on-site decontamination efficacy trials (pre/post measurements and method

used)

Ngā mihi,
Raffaella del Prete

Hello Raffaella,
Thank you for the email below.
We can confirm that testing can commence at 2pm on Friday October 17.
We will test from sample sites as required to complete a full and thorough determination of any potential contamination, inclusive of all the areas which you have referred to below.
You may undertake your own independent testing at any stage; however, Tower would only consider reimbursement for testing which is - a) claim related & b) testing which is outside of that which Tower will complete.
I am confident that the Tower Insurance testing will be transparent, quantified by lab results, and adequate to provide comfort for all parties.

Clarified scope of testing as follows:

1. 150mm diameter inspection portals cut in wall cavities of every room on the first floor at a height of 300 mm of floor level and directly underneath the top plate.
2. Testing of the roof cavity at the soffit junction where potential contaminants may have risen through the wall cavity. Testing of the roof cavity at the apex where smoke may have accumulated.
3. Testing of the underside of the rear large upper deck.
4. Testing of the basement utilizing all exposed framing cavities and 150mm testing portals cut into any remining ceiling linings in the basemen area.
5. Any additional sample sites that we feel are required during testing.

To ensure effectual testing it would be beneficial if you could confirm the following:

1. That the chlorine was located in the laundry room downstairs at the time of the fire.
2. The quantity of the chlorine that was in that room at the time of the fire.
3. Where there any other chemicals that were located in that same room, or anywhere else downstairs.

Beyond completing testing and providing laboratory results as described above, I am certain the most productive action we can make towards progressing the claim is to have a meeting where we can discuss the overall claim response process, providing a forum for you to table any questions, or concerns that you may hold. Those concerns can be responded to, and the responses can be documented via minutes with actions and agreements detailed in the minutes providing

a framework for moving forward with a pre-agreed and productive pathway. I believe this would be very worthwhile and will provide us all with detail, clarity, and documentation that we can all use to our benefit. Your lawyers and advisors would of course be welcome to attend this meeting.

I look forward to seeing you again on Friday.
Kind Regards,
Grant.

Kia ora Grant,

Thank you for your email and for confirming receipt of our letter.

Friday, 17 October after 2:00 pm works for me, and I'd appreciate it if testing and assessment could be scheduled accordingly.

I also reserve my right to undertake independent testing and assessment of the property to ensure a full and impartial evaluation.

Having reviewed the proposed plan, I'm concerned the current testing schedule appears incomplete. It does not include the first floor, roof cavity, or the large upper deck, and the basement coverage seems partial, given the known extent of smoke, water, and chemical contamination.

I therefore request confirmation that the planned inspection and sampling will be expanded to include all levels and relevant structural areas. Alternatively, please confirm that Tower will meet my reasonable costs should I need to arrange independent specialists to carry out supplementary testing (including laboratory analysis).

Please confirm the final timing for the 17th and the revised scope of testing once available.

Ngā mihi,
Raffaella

<Grant.Metson@tower.co.nz> wrote:

Hello Raffaella and Abigail,
Thank you for the letter received yesterday at 4:35
I am replying to acknowledge receipt of the letter, and to further acknowledge that Abigail will be copied into all correspondence moving forward.
I have requested that the appointed specialists provide dates and times when they can be available.
I am proposing that the following persons complete site visit, assessing & testing, as a necessary pre-requisite to providing relevant reports for all stakeholders to review:

Grant Metson – Regional Assessing Manager
Stephen Walker – Technical Building Consultant. ASURNZ.
Warwick Banks – Associate Structural Engineer. CPEng
Alexandra Dalzell – Forensic Scientist
Tyrell Craig – Restoration Cleaning Specialist.
LBP Builder [unconfirmed individual] – we will require the builder to cut inspection holes in the wall linings so testing can be completed within the wall cavities.

The intention is to test for smoke and chemical contamination within the wall cavities, and on the exposed surfaces downstairs. There will be a significant number of sample sites [tests] to be completed to be able to author a reliable report. After initial testing is completed, our intention is to apply restorative cleaning methods to targeted individual sample sites, followed by subsequent testing, post-cleaning, to provide data to measure the effectiveness of cleaning/decontamination.
All samples taken from site will require laboratory analysis before being incorporated into a report. This process may take up to 10 working days – so we want to capture swab samples from surfaces before and after the decontamination process is undertaken.

At this stage we are looking like being able to conduct this testing onsite, as well as CPEng site visit for assessment, on Friday October 17. Time to yet be confirmed.

I am unsure from your letter attached whether Raffaella and/or other nominated parties wish to be present while this testing and assessment is being conducted. Can you please confirm for me so that I can complete arrangements that will suit all parties who need to be present.

Many Thanks,
Grant.
